

Improved, Enhanced Message Box

Message Box Replacement for MS Access

Something good is waiting

Are you ready?

This presentation will introduce you to the

**Improved Enhanced Message
Box.**

It's completely **free** and easy to use.

Copy just **4 objects** to your database and go!

So, are you really ready?

Standard MsgBox

- Used in every single Access application – I am sure!
- No (easy) alternatives?

What we believe

- Bland Design
- Text Limitation
- Inability to Copy or Save
- Intrusiveness
- Plain Text Display
- Modal
- Display Limitation

Shortcomings
and Problems

Enhanced Message Box (Renaud Bompuis)

- Compatibility (MsgBox to Box)
- Copy and Save Functionality
- Consistent Design
- Preventing Hasty Closures
- Rich Content Display (RichBox)
- Handling Large Data
- Enhanced Readability
- Customization Options
- Non-Blocking Nature
- Localized Support
- Multi-Monitor Compatibility
- Unicode Support

Improved Enhanced Message Box

- Free to download, use and distribute
 - private and commercial
 - Creative Commons Attribution License 3.0
- Access 2010, 2013, 2016, 2019 (2021/365)
- 32bit, 64bit
- Download

Improved Enhanced Message Box: Features

- Your-Code-Wizard
- Custom Default Button
- AutoClose
- Delay Enable
- Avoid Long Text Code
- Custom Color Buttons
- Hover Effects
- Modal or Non-Modal

Message Design

Tests and Copy & Paste Code Wizard

Test your custom message and create custom code with Wizard

RichText

Plaintext

Your Button Code

Are you ready?

This presentation will introduce you to the

Improved Enhanced Message Box.

It's completely **free** and easy to use.

Copy just **4 objects** to your database and go!

So, are you **really** ready?

Standard MsgBox

Enhanced RichBox (creates 'Your code button')

Right click in textbox to get Rich formatting tools (HTML) in ribbon. After editing, simply press Enhanced RichBox Button (test) and grab your code from the Your-Button-Code-page!

Box Title

Enter 6 character HEX codes for RGB values. These will be computed to DEC and inserted into the fields above

* Buttons that have no labels will not be displayed.

* Make sure you do not make your labels too long.

* Dialog.Result will return the constant for the button that was pressed: vbBt1, vbBt2 or vbBt3.

* Do not set default button number to a btn that is not shown!
