

Large Monitor Support and Responsiveness

My Wish List

Large Monitor Support

- Remove the 22 inch form/report width limit (32767 twips)
- Possibly review section height limits? (less crucial?)
- Allow forms and reports to be zoomed in form / report view
- Also allow form / report zoom in design / layout view
- Zoom slider on status bar as for reports (10% to 1000%)
- All functionality to work with layout guides either off or on
- Also with both overlapping windows and tabbed documents

Off Topic:

- Allow users to select overlapping windows as default option

Responsive forms

- Forms & ALL controls to resize and reposition automatically with screen size and resolution
- Also with stretch / shrink form resizing
- This to include checkboxes / option buttons / button images, ActiveX controls and any new control types that may be added in future
- Add horizontal & vertical Can Grow / Can Shrink feature in form view
- All functionality to work with layout guides both on & off
- Also with both overlapping windows and tabbed documents
- Allow users to set resizing limits

Built-in Access dialogs

- Make the font size in message boxes & input boxes responsive to screen resolution:
 - EITHER scale up font size with resolution
 - OR provides a setting for users to make that change themselves
- (requested by email on 29 Jan & added to the specification by Linda)
